EDUCATION

Colorado College, Colorado Springs, CO December 2025
Bachelor of Arts, Major: Computer Science

- **GPA: 3.89**
- **Euclid Scholarship recipient** for outstanding performance in mathematics and computer science
- ***Relevant Coursework***: Software Design, Computer Organization, Natural Language Processing, Optimization and Deep Learning, Team Software Project, Statistical Methods, Linear Algebra, Calc. 3, DSA, Discrete Mathematics

SKILLS

Programming Languages: Python, ReactJS, C, Java, R, SQL, HTML, CSS, Lightning Web Components, Apex
Technical / Computer Skills: GitHub, Conga, Atlassian tools, Eclipse, MacOS, Windows, VSCode, JupyterLab

RELEVANT EXPERIENCE

Charles Schwab, Denver, Colorado January 2026 - Present
Associate Software Engineer

- Led migration of Dynamic Best Interest Disclosure generation from Salesforce Marketing Cloud to Financial Services Cloud so Wealth Advisors and Financial Advisors meet Department of Labor requirements in a refreshed platform.
- Implemented a strategy design pattern around an external integration so that our organization could migrate away from a contract with an external service provider.
- Migrated a Salesforce named credential to an external credential and removed user session IDs from callout payloads, so the integration authenticates with a permissioned secret instead of a reusable user session.

Charles Schwab, Denver, Colorado June - August 2025
Software Engineer Intern

- Coordinated requirements across several teams and presented to tech leads to demonstrate the need for an indexing feature within an application used to deliver client documents and forms.
- Developed core skills in the Salesforce development environment including Apex, Lightning Web Components, and SOQL.
- Delivered features on the Managed Investing Open and Enroll platform utilized by financial advisors for enrolling clients into various product offerings.

Aquincum Institute of Technology, Budapest, Hungary January - May 2025
AI Software Engineering Student Researcher

- First author of a paper on LLM software-engineering agents and code metrics. Accepted and presented at the IEEE International Conference on Cognitive Infocommunications.

Jacobs Technology, Colorado Springs, Colorado May - August 2024
Software Engineer Intern

- Collaborated on the Communication Processing Systems Team, contributing to design and architecture meetings and implementing new features in Java and C.
- Updated over 800 JUnit tests, ensuring proper packaging and delivery of satellite data and information to downstream teams.
- Passed the CompTIA Security+ exam.

PROJECTS

- **Colorado Down Ballot Visuals:** *Built a TypeScript, React, Next.js, and Postgres thesis app with four classmates, in partnership with the Denver Post, so journalists can visualize twenty years of Colorado down-ballot results. Added D3 charts and embed codes.*
- **Shelter Connect:** *Built a TypeScript, React, and Postgres guide to Colorado Springs homeless shelters at a Colorado College hackathon, so a person can see shelters and who they serve.*
- **SWE-bench Radon Metrics:** *Forked SWE-bench in Python to record Radon metrics for a repository and a model patch, so those numbers can be compared with whether the model solves the GitHub issue.*
